About Me

I am a curious problem solver with 5+ years of experience building and operating production backend systems and SaaS products. I am driven by a genuine passion for technology and engineering, and I take pride in shipping systems that are reliable, observable, and built to scale. I bring strong Python skills, deep Postgres and API design experience, and hands-on work building secure multi-tenant platforms for enterprise customers. For me, it is all about building things that work and work well.

Experience

Backend Developer, June 2025 – November 2025
Uniqode (formerly Beaconstac) Bengaluru, KA

- Developed and maintained **SSO (SAML 2.0, OAuth 2.0)** for the enterprise tier, enabling secure single sign-on for Uniqode's highest-revenue customer segment across large org deployments.
- Built **SCIM 2.0** user provisioning and de-provisioning APIs integrated with enterprise IdPs including **Azure AD, Okta, and Rippling**, automating identity lifecycle management and reducing manual IT overhead for large-seat customers.
- Engaged directly with enterprise customers to gather requirements and deliver custom features, maintaining platform stability while shipping account-specific solutions.
- **TECH STACK:** *Django, DRF, PostgreSQL, Redis, AWS(EC2, RDS, Redshift, Kinesis Firehose, Datadog, Lambda, S3, Route 53, CloudFront).*

Backend Developer, Jan 2023 – May 2025
Loan2Wheels Bengaluru, KA

- Built a **Loan Origination System** from scratch, streamlining end-to-end digital loan processing for a 2-wheeler NBFC and driving **3x growth** in processed loan volume.
- Developed a dynamic **Rule Engine** that cut loan approval time by **50%** and implemented a **Dedupe detection system** to identify and reject duplicate or fraudulent applications early.
- Automated multiple loan lifecycle stages, reducing manual processing and improving operational efficiency across underwriting, disbursement, and collections.
- Integrated with third-party services including **HDFC Life, IDFY OCR, Knowlarity, Razorpay, Digio, CRIF, and a Loan Management System** for seamless end-to-end business operations.
- **Migrated terabytes of data** safely and led the platform to achieve **VAPT** (Vulnerability Assessment and Penetration Testing) certification.
- **TECH STACK:** *Python, SQL, NGINX, Redis, AWS (EC2/S3/DataSync/Lambda).*

Full Stack Developer, Jan 2019 – Jan 2023
Nimap Infotech Mumbai, MH

- Developed and maintained core backend systems for a **Recruitment CRM**, improving candidate tracking and recruitment workflows for a multi-tenant SaaS platform.
- **TECH STACK:** *Python, Django, DRF, Git, Linux, SQL, AWS (EC2/S3/RDS/SNS).*

Projects

WhatsApp Automation Platform Project Link

- Designed and built a WhatsApp automation platform from scratch to improve customer engagement, automate support, and run personalized campaigns and reminders.
- Developed **REST APIs and Webhooks** with Python, enabling dynamic conversation flows and easy integration with external systems.
- Built an **Analytics Module** with structured logging and dashboards for monitoring, debugging, and measuring campaign performance.
- Simplified workflow creation with **code-free, JSON-configured chat flows**, cutting engineering involvement and speeding up campaign launches.
- **RESULT:** Direct and indirect contribution to **organization revenue by 5%**, **user engagement increased by 80%**, **reduced man-hours by 150 hours per month**, improved customer convenience and satisfaction.
- **TECHNICAL SKILLS:** *Python, React, Tailwind, Redis, Postgres DB, Celery, Git, Figma.*
